Alexander Matveev

Full-Stack Developer

Full-Stack Developer passionate about crafting modern web applications and automating workflows through the terminal. Skilled in both frontend design and backend logic

Development Experience

PFN Job Application Tracker

Full-stack platform for organizing and tracking personal job applications, featuring secure authentication with 2FA (TOTP + backup recovery codes) and Dockerized client/server deployment. The application is fully tested with Playwright & Vitest on the client side and Pytest on the server side.

[GitHub Repository](#)

[Live on Fly.io](#)

Built with: TypeScript, Next.js, Webpack, Redux, Python, mypy, FastAPI, PostgreSQL with SQLAlchemy and Alembic

Next PERN Learning Platform

Full-stack platform for creating and managing courses, where each course contains structured concepts and interactive tests. Each concept includes its own test with multiple-choice questions, where users select one correct answer to validate knowledge learned.

[GitHub Repository](#)

[Live on Fly.io](#)

Built with: TypeScript, Next.js, Webpack, Redux, Fastify, PostgreSQL and Prisma.

PERN Stack BookStores App

Full-stack platform for bookstore management and e-commerce. Owners can create bookstores, add employees with role-based permissions, manage books, update order statuses, and track stock levels. Customers can browse and purchase books directly through the platform.

[GitHub Repository](#)

[Live on Fly.io](#)

Built with: TypeScript, Vite, React, Redux, Express, PostgreSQL and Sequelize, Stripe.

MERN Stack Food Delivery App

Full-stack platform for online food ordering. Restaurants can create accounts, add dishes, and manage order statuses in real time. Customers can browse menus, place orders, and track their delivery progress.

[GitHub Repository](#)

[Live on Render.com](#)

Built with: TypeScript, Vite, React, Express, MongoDB and Mongoose, Stripe.
